

## Notes for contributors

A submission to Applied Probability is considered as a submission to either *Journal of Applied Probability* (JAP) or *Advances in Applied Probability* (AAP). Longer papers are typically published in AAP, but the assignment of papers between the two journals is made by the Executive Editor on an issue-by-issue basis. Short communications and letters specifically relating to papers appearing in either JAP or AAP are published in JAP.

Papers submitted to the Applied Probability journals are considered on the understanding that they have not been published previously and are not under consideration by another publication. Accepted papers will not be published elsewhere without the written permission of the Trust. Submitted papers should be in English. It is the author's responsibility to ensure an acceptable standard of language, and a paper failing to meet this requirement may go back to the author for rewriting before being sent out for review.

Papers should include: (i) a short abstract of 4–10 lines giving a non-mathematical description of the subject matter and results; (ii) a list of keywords detailing the contents; and (iii) a list of classifications, using the 2020 Subject Classification scheme ([mathscinet.ams.org/mathscinet/msc/msc2020](http://mathscinet.ams.org/mathscinet/msc/msc2020)). Letters to the Editor need not include these. To assist authors in writing papers in the Applied Probability style, they may use the L<sup>A</sup>T<sub>E</sub>X class file `aptpub.cls`, available from [appliedprobability.org](http://appliedprobability.org). Use of this class file is not a condition of submission, but will considerably increase the speed at which papers are processed.

Papers should be submitted electronically through ScholarOne at <https://mc.manuscriptcentral.com/apjournals>. All submissions will be acknowledged on receipt.

## Copyright

The copyright of all published papers is vested in the Applied Probability Trust. When a paper is accepted for publication, the Trust asks the authors to assign copyright by signing a form in which the terms of copyright are listed. Failure to do this promptly may delay or prevent publication.

Authorisation to photocopy items for internal or personal use, or the internal or personal use of specific clients, is granted by the Applied Probability Trust for libraries and other users registered with the Copyright Clearance Center (CCC) Transactional Reporting Service, provided that the corresponding processing and royalty fees (see <http://www.copyright.com>) are paid directly to CCC, 222 Rosewood Drive, Danvers, MA 01923, USA. 0021–9002/19

## Volume 61 Number 2

### Original Articles

- 369 STEFAN ANKIRCHNER, ROBERT HESSE AND MAIKE KLEIN. On the joint survival probability of two collaborating firms
- 385 SUNMIN LEE AND JI OON LEE. Phase transition for the generalized Two-community stochastic block model
- 401 MINDAUGAS BLOZNELIS, JOONA KARJALAINEN AND LASSE LESKELÄ. Normal and stable approximation to subgraph counts in superpositions of bernoulli random graphs
- 420 YAN DOLINSKY. Duality theory for exponential utility-based hedging in the Almgren–Chriss model
- 439 HE YI, NARAYANASWAMY BALAKRISHNAN AND XIANG LI. Reliability analyses of linear Two-dimensional consecutive  $K$ -type systems
- 465 HAOYANG CAO AND XIN GUO. Stochastic differential equation approximations of Generative adversarial network training and its long-run behavior
- 490 BO LI AND GUODONG PANG. Heavy-traffic limits for parallel single-server queues with randomly split Hawkes arrival processes
- 515 ERIK EKSTRÖM AND YUQIONG WANG. Stopping problems with an unknown state
- 529 SIMONE A. PADOAN AND STEFANO RIZZELLI. Strong convergence of peaks over a threshold
- 540 JINGHAI SHAO. Comparison theorem and stability under perturbation of transition rate matrices for regime-switching processes
- 558 JORGE LITTIN CURINAO AND GERARDO CORREDOR RINCÓN.  $R$ -positivity and the existence of zero-temperature limits of Gibbs measures on nearest-neighbor matrices
- 578 GEORGE V. MOUSTAKIDES, XUJUN LIU AND OLGICA MILENKOVIC. Optimal stopping methodology for the secretary problem with random queries
- 603 SHOOU-REN HSIAU AND YI-CHING YAO. Stochastic ordering results on the duration of the gambler’s ruin game
- 622 YAN-XIA REN, RENMING SONG AND RUI ZHANG. Weak convergence of the extremes of branching Lévy processes with regularly varying tails
- 644 MAHDI ALIMOHAMMADI AND JORGE NAVARRO. Resolving an old problem on the preservation of the IFR property under the formation of  $K$ -out-of- $N$  systems with discrete distributions
- 654 ANDREA OTTOLINI AND RAGHAVENDRA TRIPATHI. Central limit theorem in complete feedback games
- 667 ROBERTO CORTEZ. SIR model with social gatherings
- 685 FRANCESCO BUONO, YONG DENG AND MARIA LONGOBARDI. The unified extropy and its versions in classical and Dempster–Shafer theories
- 697 SERVET MARTÍNEZ AND WERNER NAGEL. Tessellation-valued processes that are generated by cell division
- 716 M. KHANDAKAR AND K. K. KATARIA. On a Time-changed variant of the generalized counting process
- 739 JORGE LITTIN CURINAO AND GERARDO CORREDOR RINCÓN.  $R$ -positivity and existence of zero-temperature limits of Gibbs measures on nearest neighbors matrices – Corrigendum
